ASSIGNMENT TITLE: DATA CLEANING, ANALYSIS & VISUALIZATION WITH EXCEL

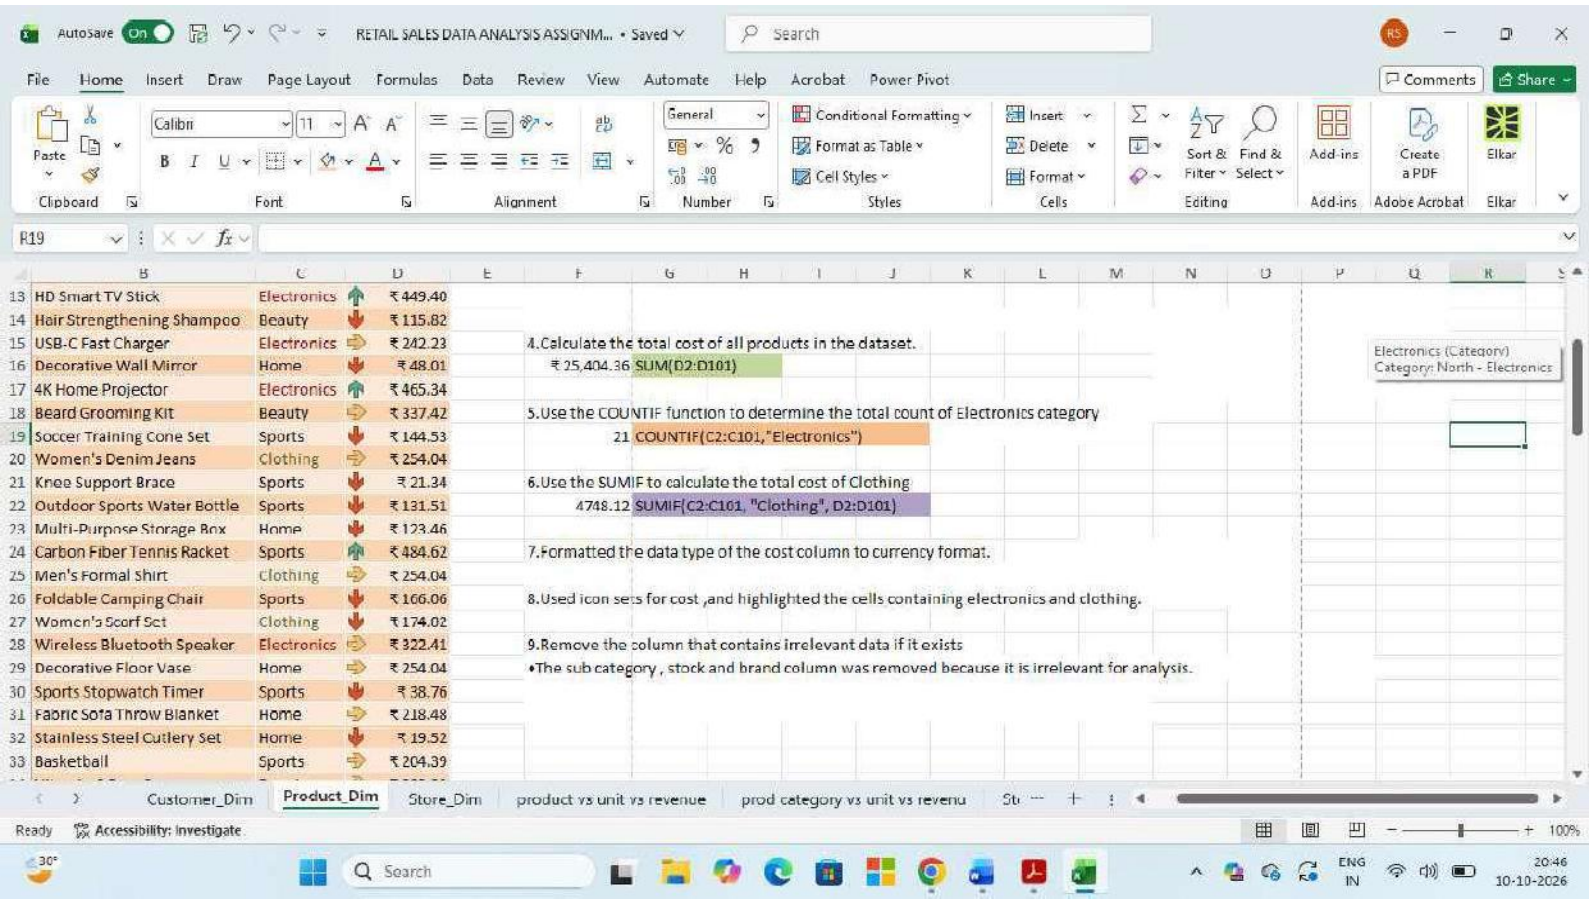

PROJECT TOPIC: E-COMMERCE SALES DATA ANALYSIS USING MICROSOFT EXCEL

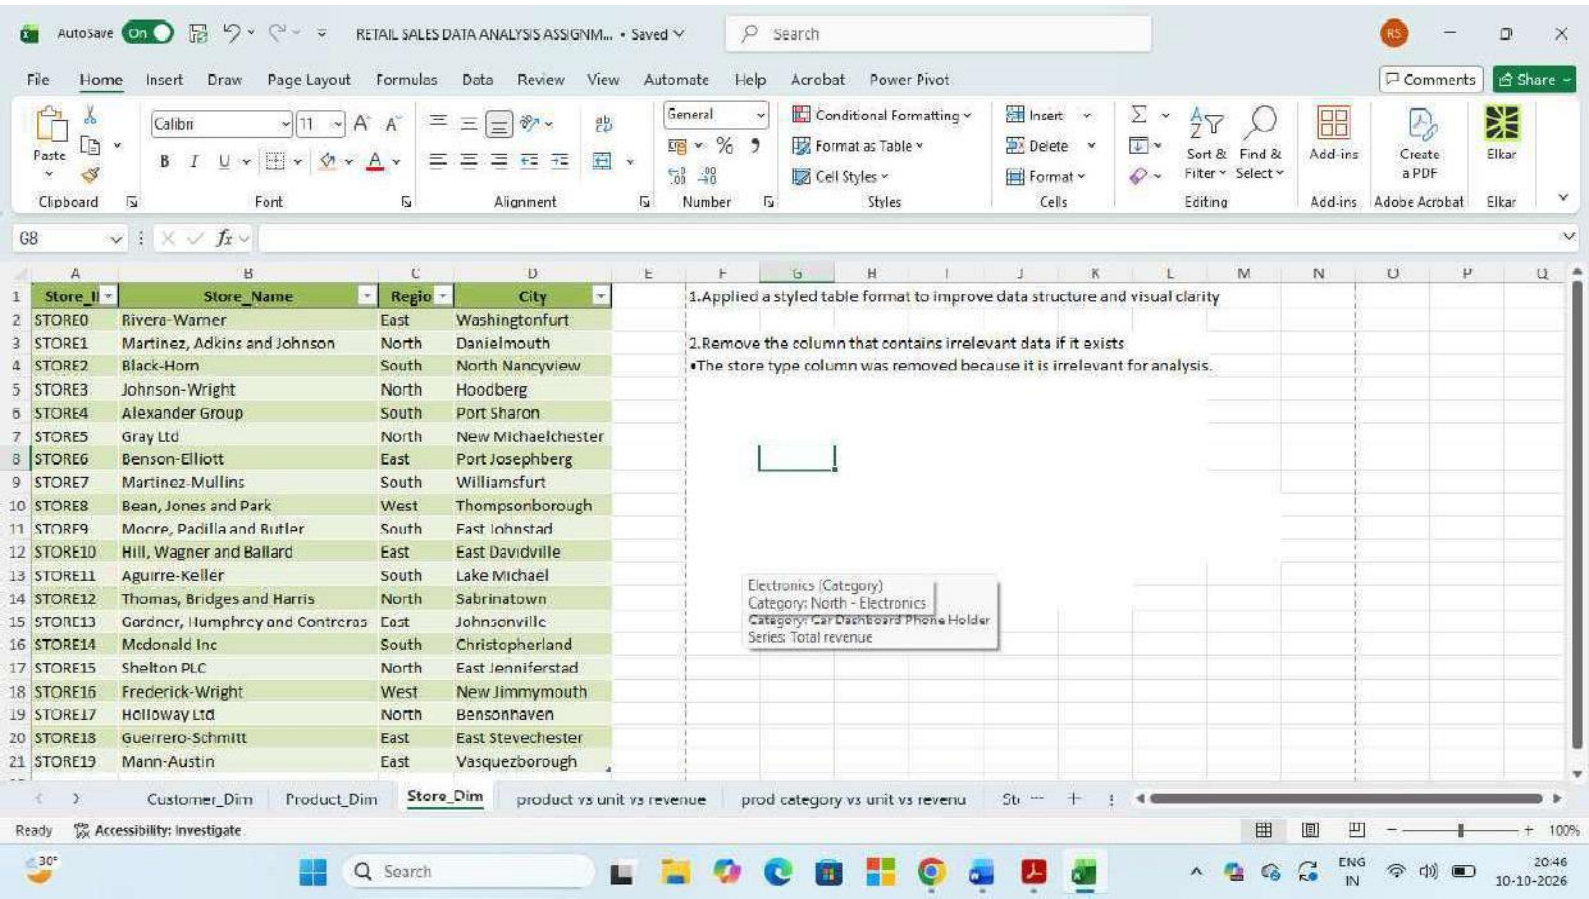

Summary:

- This project focuses on cleaning, analysing, and visualizing an E-commerce sales dataset using Microsoft Excel.
- It involves identifying duplicate records, handling missing and inconsistent data, applying Excel formulas and lookup functions, and summarizing information using Pivot Tables and descriptive statistics.
- Charts, Pivot Charts, and an interactive dashboard are developed to present key sales insights and support data-driven business decisions.
- This assignment demonstrates the practical application of Excel for data analysis, business reporting, and visualization as part of my journey toward becoming an aspiring Data Analyst.

1.Applied a styled table format to improve data structure and visual clarity
2.Identify any inconsistent text formats present in the Product ID column.
Use the find and replace function to standardize the text formats in the Product ID column
•Inconsistencies were identified in the Product ID and corrected using
Find and Replace to ensure uniform formatting throughout the dataset.
Electronics (Category)
Category: North - Electronics
3.Check for missing values in the cost column.
If there are products with missing categories, propose a strategy to impute or deal with these missing values effectively.
•The missing cost were replaced with the Average of the available values using formula
IF(ISBLANK(D2),AVERAGE($D$2:$D$101),D2)
4.Calculate the total cost of all products in the dataset.
₹25,404.36 SUM(D2:D101)
5.Use the COUNTIF function to determine the total count of Electronics category
21 COUNTIF(C2:C101,"Electronics")
6.Use the SUMIF to calculate the total cost of Clothing

Home	965	499075.0919
Sports	1241	635440.03
Grand Total	**4953**	**2548106.94**

3.Electronics high units sold and high revenue generated compared to clothing

Electronics recorded higher sales due to strong demand for gadgets and frequent product upgrades, while clothing sales were lower due to varying fashion trends and seasonal purchasing patterns.

Store city	Total units	Sum of revenue
Thompsonborough	344	185351.24
Hoodberg	292	147511.15
Bensonhaven	275	143833.83
Williamsfurt	273	125499.18

East Stevechester	247	122370.55
East Jenniferstad	243	117454.96
Johnsonville	243	136410.49
Vasquezborough	240	109963.71
East Johnstad	236	126549.98
Danielmouth	230	114592.90
Christopherland	224	122885.99
North Nancyview	220	116155.25
Lake Michael	206	109128.64
Washingtonfurt	204	97145.53
New Michaelchester	200	95366.36

1.Bean, Jones and Park store generates the highest overall revenue

2.Thompsonborough performs best in terms of total units sold and revenue contribution?

3.There are no stores have strong sales volume but lower overall revenue efficiency

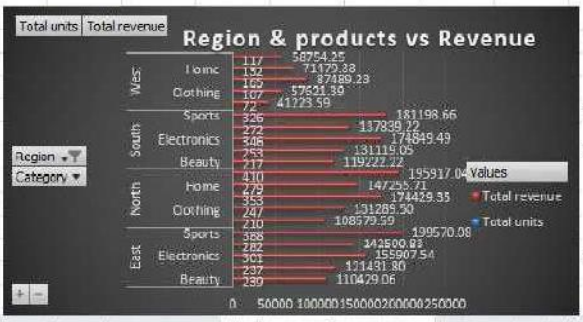

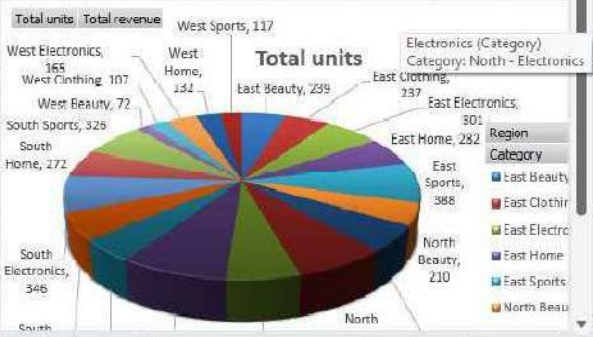

Region & products	Total units	Total revenue
East		
Beauty	239	110429.06
Clothing	237	121431.80
Electronics	301	155907.54

South		
Beauty	217	119222.22
Clothing	253	131119.05
Electronics	346	174849.49
Home	272	137839.22
Sports	326	181198.66
West		
Beauty	72	41223.59

1.The North region achieved the highest revenue due to strong sales volume, followed closely by South and East.
West recorded the lowest revenue, mainly because of its significantly lower unit sales across product categories.

2.The North region contributes the maximum percentage share to total company turnover, driven by its strong sales performance across product categorie

3.Electronics and Sports generated higher revenue due to higher unit sales and the higher value of products sold,
while Beauty recorded lower revenue because fewer units were sold and its overall sales contribution was smaller.

EXCEL PROJECT: E-COMMERCE SALES PERFORMANCE & PIVOT TABLE ANALYSIS

Problem Statement

A retail enterprise operates across multiple regional branches (East, North, South, and West), offering merchandise across diverse categories such as Electronics, Clothing, Home, and Sports. Management requires an analysis of sales transaction data from late 2023 through late 2025 to evaluate revenue momentum, geographic market share, and customer buying behavior.

The raw data is organized across relational tables (Sales_Fact, Customer_Dim, Product_Dim, and Store_Dim.

To support executive decision-making, you are required to analyze the transactional data using Pivot Tables, Pivot Charts, Data Modeling (Lookups), and an Interactive Dashboard to transform raw records into actionable insights.

🎯 Objectives of the Excel Analysis

The goal of this project is to:

- **Summarize large datasets using Pivot Tables.**
- **Visualize trends and category distributions using Pivot Charts.**
- **Build relational lookups and calculations using Excel formulas (XLOOKUP / VLOOKUP).**
- **Create a dynamic and interactive dashboard with linked Slicers and Timelines.**
- **Present business findings and strategic recommendations for management review.**

📌 Business Questions to Be Answered

1. Overall Sales Performance

- **What is the total revenue and total units sold?**
- **Which date recorded the highest and lowest total revenue?**

2. Product & Category Performance Analysis

- **Which Product contributes the highest overall revenue and units sold?**
- **Which products drive high sales volume (Quantity) but yield lower total revenue?**
- **Compare performance between electronics and clothing.**

3. Store Performance

- **Which store generates the highest overall revenue?**
- **Which City performs best in terms of total units sold and revenue contribution?**
- **Are there stores with strong sales volume but lower overall revenue efficiency?**

4. Regional Analysis

- **How does sales revenue compare across the four geographic Regions (East, North, South, and West)?**
- **Which region contributes the maximum percentage share to total company turnover?**
- **How do product category preferences (Category) vary across each regional territory?**

5. Customer Performance Analysis

- **Which customer Loyalty Level (Bronze, Silver, Gold, Platinum) generates the highest total sales?**
- **Who spends more in total revenue: Male or Female customers?**

6. Pricing & Revenue Efficiency

Pricing & Revenue Efficiency

- **Which product category has the highest and lowest average selling price per unit (Unit_Price)?**
- **Which category receives the highest Average Discount Rate?**

RETAIL SALES DATA ANALYSIS

Four Types of Business Analytics

1. Descriptive Analytics – What Happened?

- **Total Revenue: ₹2,548,106.94**
- **Total Units Sold: 4,953 units**
- **Top Product by Revenue: Portable Power Bank – ₹50,615.34**
- **Top Product by Quantity: Men's Casual Sneakers – 87 units**
- **Top Category: Sports – ₹635,440.03**
- **Top Region: North – ₹757,471.19**
- **Top Store: Bean, Jones and Park – ₹185,351.24**
- **Top Loyalty Tier: Platinum – ₹769,955.57**

Analysis: Sports generated the highest revenue. North was the best-performing region, and Platinum customers contributed the most revenue.

2. Diagnostic Analytics – Why Did It Happen?

- **Sports sold more units than Electronics.**
- **West recorded fewer transactions than North.**
- **Platinum customers had the highest number of transactions.**

Analysis: Differences in the number of units sold and transactions contributed to the differences in revenue. More information is needed to identify the exact reasons.

3. Predictive Analytics – What Could Happen Next?

- **The Forecast sheet estimates future sales using past data.**
- **The forecast results are uncertain and may not be accurate.**
- **Sports products and Portable Power Banks can be monitored for future demand.**

Analysis: Past sales can help estimate future demand, but actual sales may change.

4. Prescriptive Analytics – What Should Be Done?

- **Maintain sufficient stock of popular products.**
- **Investigate the reasons for lower sales in the West region.**
- **Provide suitable offers to retain Platinum customers.**
- **Check product costs before deciding which category is most profitable.**
- **Verify the discount calculation before reporting discount percentages.**

Analysis: Management should improve stock planning, investigate weak sales areas, and use accurate data to make business decisions.

Conclusion

Sports was the highest-revenue category, North was the leading region, and Platinum customers generated the highest revenue. The business should focus on popular products, improve sales in the West region, and use reliable forecasts for future planning.
